Intro

AnalytEx: the power of real-time data driven decisions in the DeFi space.

AnalytEx is a platform for blockchain users and projects, with exclusive capabilities of an end-to-end Advanced Analytics framework. With AnalytEx, you can access valuable insights based on over a billion daily transactions and events carefully processed in real time. We want our users to make data-driven decisions faster than others, as soon as the opportunity appears on the chain.

AnalytEx is more than just another way of collecting data. It uses sophisticated technologies and tools like data mining, AI and predictive analytics models to discover insights and present them in a meaningful way. It gives you context, helps you get more out of your data. Just like that, complex blockchain data becomes open to any user, without the need for a deeper understanding of technology behind it.

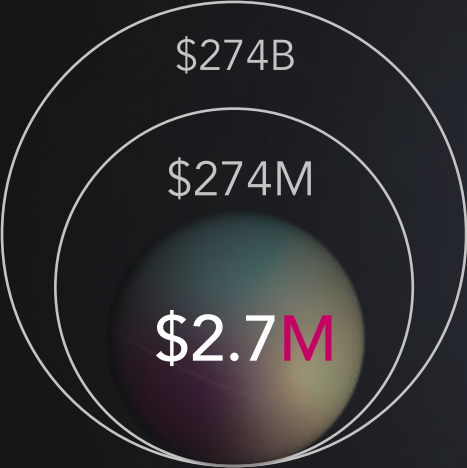

Cross-chain analytics made simple. For everyone.

One of the most valuable features in blockchain-based economics is its publicity of data - it increases trust, security and transparency. Nevertheless, there are lots of pitfalls like terabytes of data, lagging nodes, complicated interfaces, and other roadblocks.

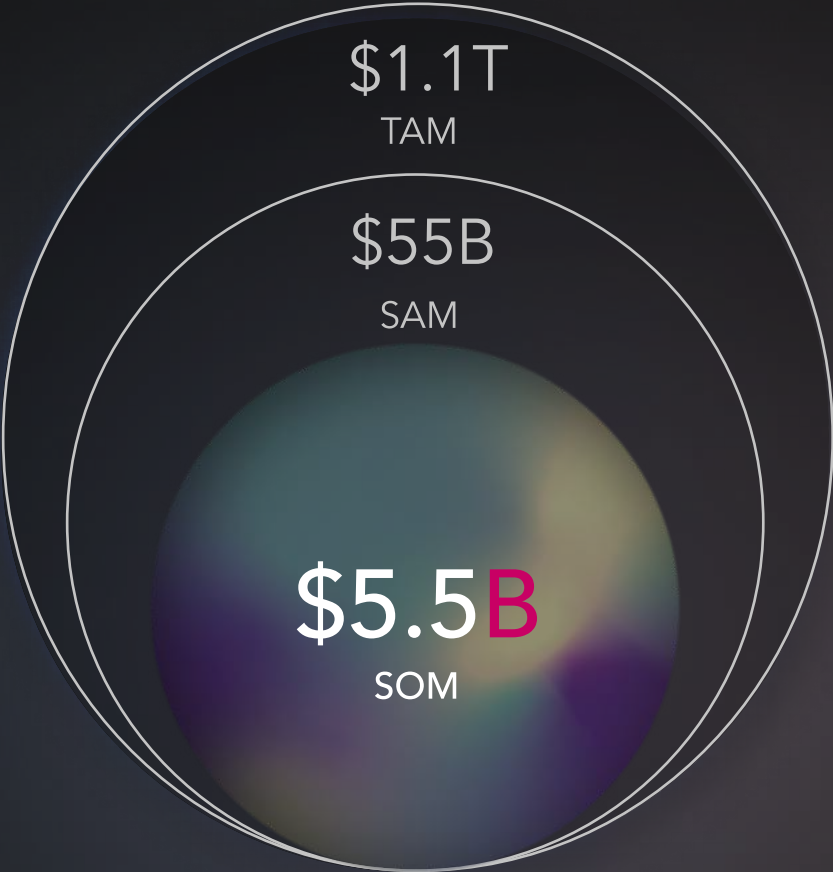

AnalytEx solves these issues. Using the power of blockchain and big data, we offer best in class solutions for making data-driven decisions instead of intuitive ones. We deliver powerful insights that provide users with different kinds of competitive advantages.

Market Size

▲ 58.5%

2022

2025

AnalytEx combines data from Ethereum (EVM) compatible blockchains in real time, cleanses data, runs through the analytical engine, aggregates, and finally stores it in an easy-to-access manner. Through the BI suite and the Smart alerting system, you can then receive remarkable in-time data insights, helping you make the right decisions.

We use High Availability nodes across the world on multiple chains: Binance Smart Chain, Ethereum, Polygon, Avalanche, Gnosis, Fantom, and more to be added.

Ethereum blockchains

Raw Data Sources

- Smart Contracts
- Transactions
- Events
- Wallets

Single Source of Truth

DeFi protocols

- Exchanges
- Farms
- Staking
- Lending
- Tokens
- NFTs
- P2E Games

Insights

- DeFi Data Explorer
- Yield Farm Aggregator
- Lending Aggregator
- Crypto Prices
- Wise Money
- Meta Gems

... and more

1 Single Source Of Truth

At the core of the AnalytEx platform are the invaluable sources of truth. Data sources stored in our cloud data warehouse contain both real-time and historical data going back as far as the first block in the blockchain. With AnalytEx, users will be able to access not only raw data, but also clean and reliable aggregated data that's been carefully processed by the smart contract detector and analytical engine.

2 Smart Alerts

Users will never miss important events with our customizable notification system. Users will be able to receive notifications via telegram and email.

3 Self Service

AnalytEx offers its users the power to find their own answers. There is no need to wait for a 3rd party to answer your question or search for it online - find answers right here right now.

4 API-first

We use an API-first approach streamlining the way we engage with users. AnalytEx is scalable, extensible and adoptable. Its API provides the ability to easily integrate with new markets and business solutions in the future.

Solutions

Yield Farming Aggregator

The solution provides the ability to monitor yield farming APYs in real time and choose the best farm or pool to stake. All the essential data is present in one place: rewards, TVL, APR, social media channels, and more. It's possible to stake, claim rewards, or just check the information. No need to go to a thousand places to harvest your farming rewards.

Lending Protocols Aggregator

Lending Protocols Aggregator optimizes data of various DeFi lending protocols in an easy-to-navigate interface, all in one place. Investors who want to increase their passive income are often forced to move assets between several lending protocols seeking higher APY. The solution compares protocols and finds the best lending opportunities.

Crypto Prices

Crypto prices is a price-tracking solution for crypto assets that allows users to follow cryptocurrency prices, total supply and market cap changes. Unlike other websites, AnalytEx does not act as a 3rd party, it auto-detects and lists new ERC-20 tokens data, and takes all data directly from the blockchain without delays.

Wise Money

Wise Money is an advanced portfolio management that helps investors control funds, stay alert and maximize their return on investment. The solution provides money makers and institutions with an opportunity to account transactions, make comments, see historical assets performance.

Meta Gems

Take a deep dive into the most popular NFT projects and discover new upcoming gems. With AnalytEx, it is easy to get a hand on any assets whether it's a fungible token or an NFT.

Features

All solutions come with various features powered by the AnalytEx platform.

Dashboards

Dashboards are an essential instrument to get visibility into key performance indicators. Visualisations enhance the decision making process.

Insights

Usually, projects go through multiple phases before being listed and/or publicly marketed. Once they do, in many cases it's too late to invest in them (mainly due to botting and the number of people who are already aware of internal / private stages).

AnalytEx will scan blockchains and automatically list upcoming DeFi projects as soon as their smart contract is deployed on the chain. This will make the information readily available to potential investors who are willing to take on the heaviest risks or do extensive research on their own.

Self Service

Having barrier-free access to data is the key to faster, better decisions. Data democratization is the foundation for the AnalytEx self-service capabilities that provide users with the ability to get reliable data insights on their own terms. Users get the power to quickly extract information from various sources, explore it, get valuable insights, create visualizations, and make data-driven decisions.

Sources of Income

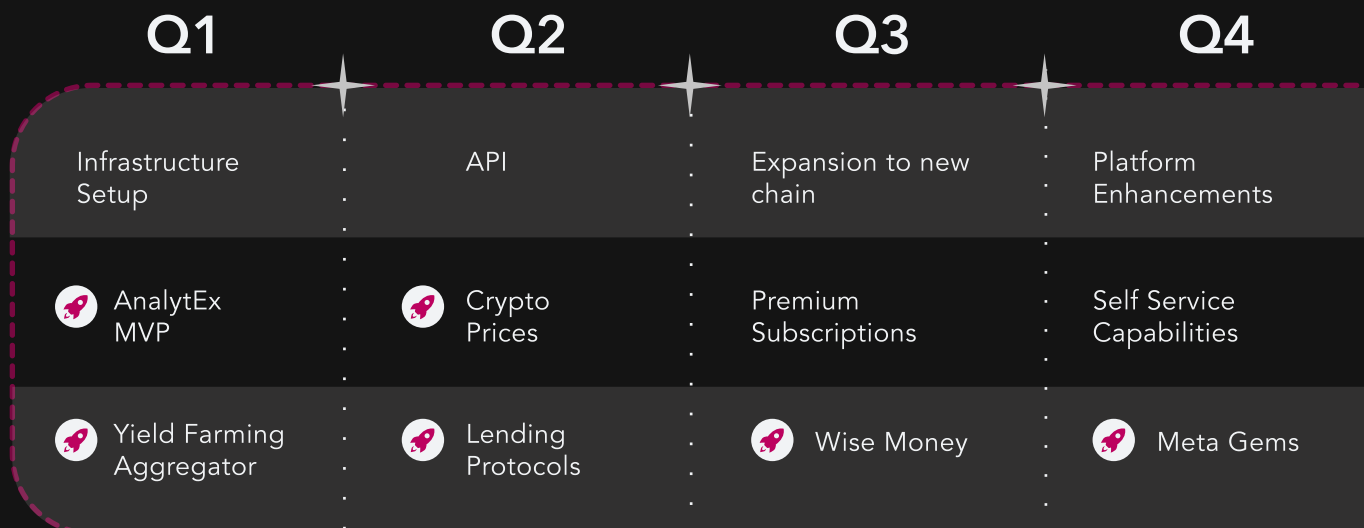

- Subscriptions for raw and aggregated data
- Paid custom reports and dashboards
- Subscriptions for notifications and triggers
- Premium features and tools for stakers
- Paid API

Roadmap 2022

We start our product suite with the AnalytEx-as-a-Service Platform that will power several solutions:

- Yield Farming Aggregator
- Lending Protocols Aggregator
- Crypto Prices
- Wise Money
- Meta Gems

We follow Lean principles in our development process, and all products and features will be delivered quickly and consistently.

People

We are a team of highly skilled and talented blockchain developers, smart contract auditors, product owners, dev ops, analysts, and data scientists.

Backed by

HashEx

One of the most impactful tech advisories in the industry. 500+ smart contracts have been audited since 2017. **\$2B+** of funds are being secured.

hashex.org

CryptEx
Locker

The Digital Vault protects over **\$500M** of funds of 640 projects and their investors.
